

## **VOLTAGE-CONTROLLED DELAY CIRCUIT USING SECOND-ORDER PHASE INTERPOLATION**

### **Abstract of the Disclosure**

5       Phase interpolation techniques for voltage-controlled delay line (VCDL)  
implementation are provided. The techniques of the invention may employ a  
second-order phase interpolation topology to improve tuning range performance of the  
VCDL over process and temperature variation. In one aspect of the invention, the  
technique may use a complementary input signal to set an absolute 180-degree phase  
reference. As a result, the maximum tuning range of 180 degrees can be achieved  
10       regardless of internal delay variation.
